SWOT_Analysis

Strengths (S)

- Key point area for people that move from the suburbs to the town centre.
- Existing infrastructures for tram, bus and parking.
- Variety of the dynamic of the local habitats (family housing, student housing) and also of the budget levels.
- Multiple categories of services (hospital and medical research centre, Ensam, IUT, sport's centre)
- Large space of unused green areas.

Weaknesses (W)

- The noises of the cars on the highway passing next to the site.
- The large spaces are separated into smaller ones that aren't suitable for redesigning plazas and various utility and social interaction places.

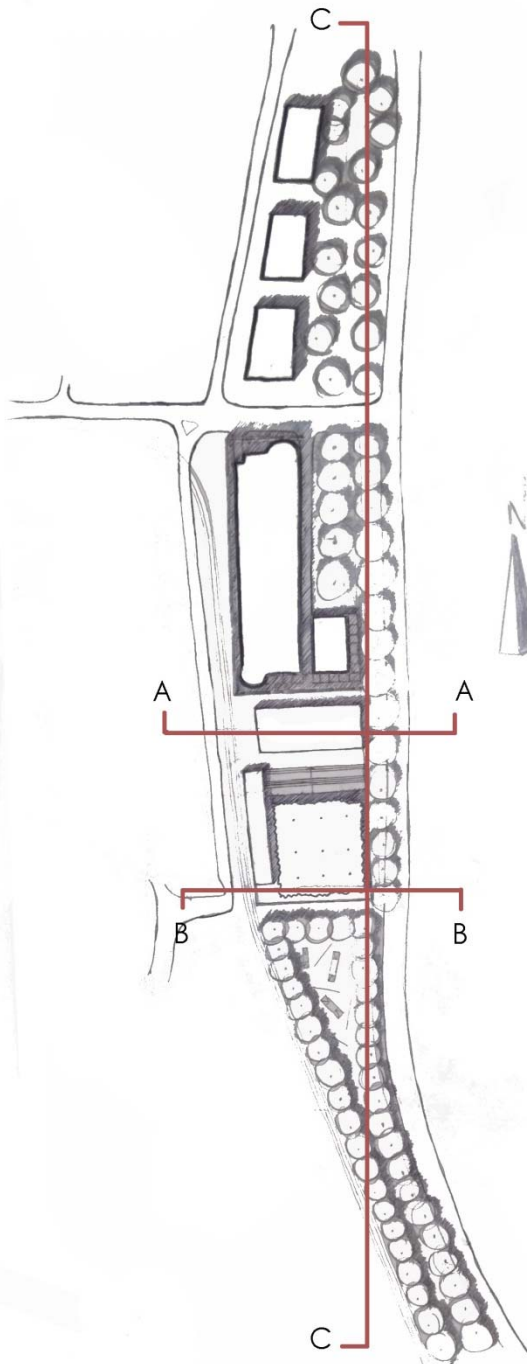

Opportunities (O)

- The area can be redesigned to be a social interaction place.
- The free spaces can be used for exhibiting architecture creations of the students so that it can bring to the surface the isolated school of architecture.
- The place can fulfill people's everyday needs, but it can also be used for quick stop services for people that pass by.
- It could be retransformed to a place with a character so that it can be a recognizable tram station and landmark

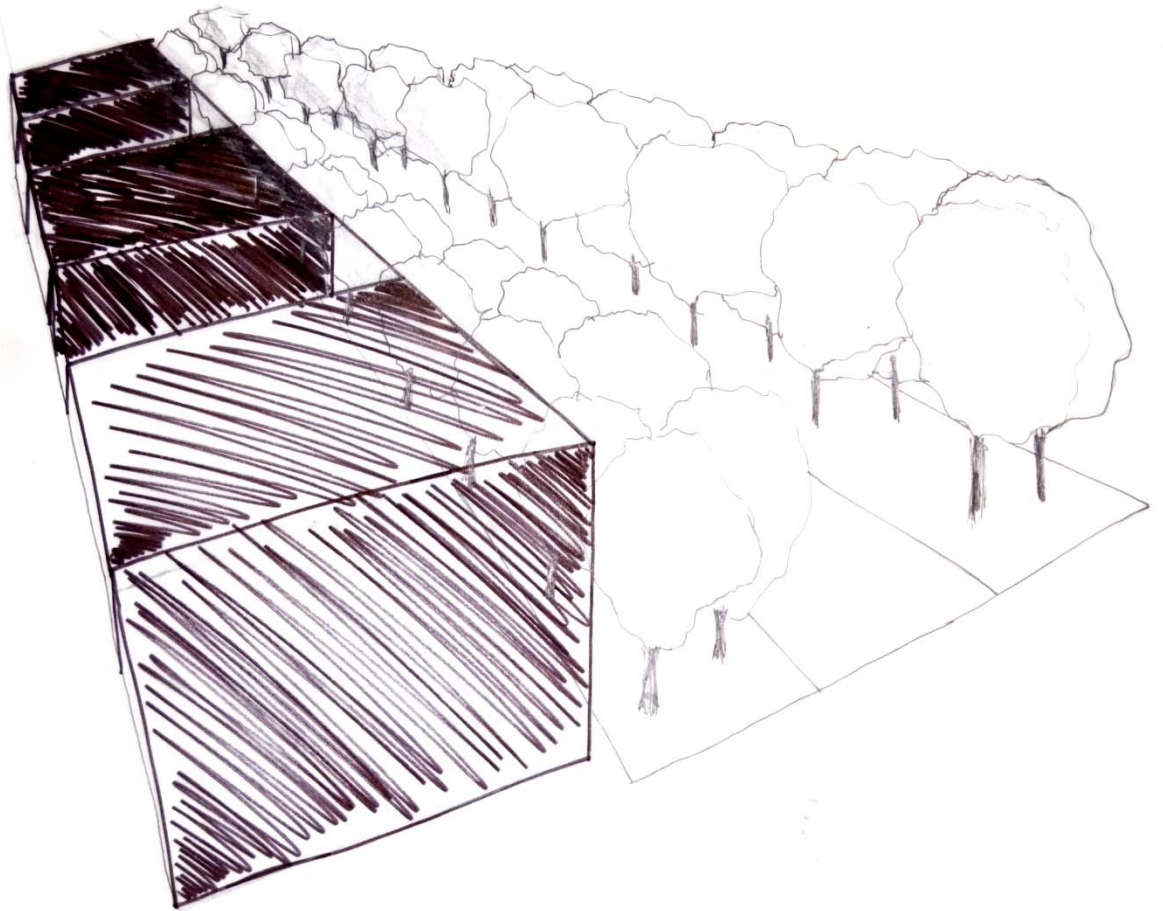

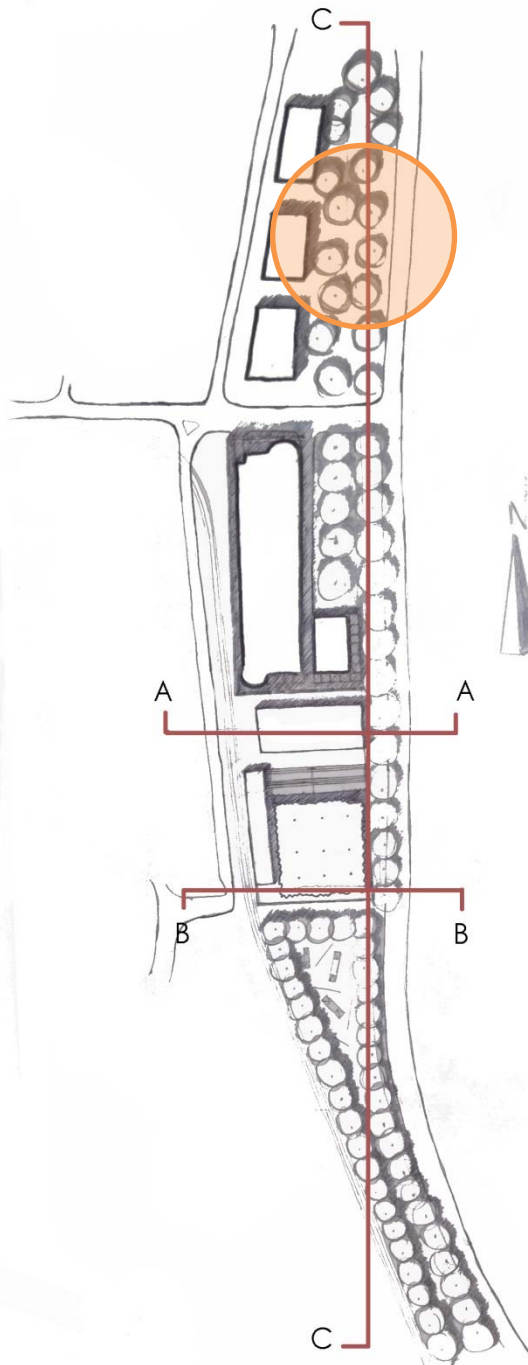

Threats (T)

- The threat of becoming a "no place" and be just an insignificant area that people pass by.
- The space may eventually end up accommodating uses other than the ones for social interaction and recreation.
- Increased dangerous threats at night because of the unused large areas.
